

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

VIII. *A preternatural Perforation found in the upper Part of the Stomach, with the Symptoms it produc'd, by Mr. Christopher Rawlinson, Surgeon.*

James Skidmore had complain'd for Three or Four Years last past, of a violent Pain in his Stomach and Bowels, never being able to rest in his Bed at Night, 'till he had vomited up the greatest Part of what he had eat or drank the Day before. He would often compare his Pain to some great Weight laying upon the Region of the Stomach, which he in some Measure alleviated, by pressing hard with his Hand upon that Part. When he turn'd himself in Bed from one Side to the other, he told me, he could plainly perceive that some Fluid or other fell down with Noise to the depending Side; which Fluid he believ'd to be the Occasion of all his Misery: For which Reason he often said, he would willingly consent, nay, often earnestly press'd that the Surgeons would cut him open (as he expressed it) and let it out.

He had no apparent *Tumour* upon the Part, nor was his Belly more *extended* than usual. He had had the Advice of several able Physicians before he came into the Hospital, but all without the least Amendment to his Disease. When he died we were desired to open him, and try if we could find out the Cause of his Complaints. As soon as we had penetrated the *Peritonæum*, there flow'd out a whitish Liquor, not much unlike to *Whey*, only a little more thick and fæculent;

nor

nor did it emit so noisom a Smell as might be expected from its long Residence in that Place. We computed there were above Four Quarts of this Liquor contain'd in the *Cavity* of the *Abdomen*.

When we came at the *Stomach* we found it *perforated* in its *upper* Part, about the middle Space betwixt the Two Orifices, wide enough to contain the End of one's Finger. We cut it open Length-ways, and found it pretty full of a thick glutinous Matter, inclining to be yellow; and to its inner Coat, on the lower Side, there firmly adher'd the Stone of a *Prune*, or some other Fruit resembling it. On its Inside, near the preternatural Perforation, 'twas gangreen'd for two or three Inches; and on the other Side of the Perforation there was an *Ulcer* near the same Bigness. The whole Stomach was a great deal thicker than usual; but that Part next the *Pylorus* was above Four Times thicker than in a natural State. It *adher'd* closely to all the Parts about it; and to the *Pancreas* 'twas so firmly ty'd down, that it could not be separated without tearing. The Spleen did not exceed a Quarter of an Ounce in Weight. The *Pancreas* was *schirrous*, tho' pretty near its natural Size. In the *Liver* and *Kidneys* there was no apparent Defect; nor had the Parts in the *Thorax* receiv'd any visible Alteration, except that the *Lungs* adher'd more firmly to the *Pleura* than usual. The *Intestines* and all the *Viscera* contain'd in the *Abdomen* were of a whiter Colour than usual, by being so long foddin in the Liquor they floated in.
